Both Triosorb and Tetrasorb are in vitro tests providing accuracy, speed and convenience. They are available in disposable kits ready for immediate use at room temperature.

"The T-3 uptake test was vastly improved by a resin-sponge . . . (Triosorb) . . . which is offered as a replacement for the red cells as well as for the loose granular resin which varies from day to day."

Tetrasorb is the first diagnostic kit offering a direct measurement of thyroid function by determining serum thyroxine. Hypothyroid patients show a decrease in serum thyroxine while hyperthyroid patients show an increase. In euthyroidism, interfering conditions cause the T-3 and T-4 to move in opposite directions whereas in hypothyroidism or hyperthyroidism, both tests move in the same direction.

By requesting both Tetrasorb (a direct measure of thyroid activity) and Triosorb (an indirect measure of thyroid activity) for his patient, the physician can make his diagnosis with increased confidence.

If you suspect thyroid dysfunction,

“No single laboratory test of thyroid function is diagnostically perfect for all patients.”

That’s why Abbott offers both a T-3 test (Triosorb) and a T-4 test (Tetrasorb).

“The serum T4, being completely specific, comes closest to the ideal test and is better correlated with clinical status than any other routine test. The serum T4 alone is adequate for the vast majority of patients. Because of variations in the T4 binding capacity of the serum proteins in pregnancy, in various disease states, and as a result of certain medications, misleading T4 results may be obtained occasionally.”

“Fortunately, the generally available resin uptake of $^{131}$I-triiodothyronine (Triosorb test) is a useful procedure to complement the serum thyroxine determination, particularly when values of the latter do not seem consistent with the clinical picture.”

“In summary, our experience with the serum T4 in the past three years has proven it a completely specific and highly accurate diagnostic test. Diagnostic errors are relatively easily detected if a T3 Resin test is used concurrently. We now use the T4 instead of the PBI as the routine screening test of thyroid function.”

The LOGIC™ Well Counter

is only inches larger than this page (12¼” x 4½” x 13” to be exact)

Please lift this page for information about Tetrasorb™ and Triosorb®

TM—TRADEMARK

904103
The LOGIC Series—the most compact counting systems ever designed—is available in 3 models.

The LOGIC Counting Systems offer:

- **Compactness** (micrologic integrated circuitry)
- **Dependability** (thoroughly pre-tested)
- **Portability** (25 to 35 lbs.)
- **Versatility** (multi-test capability)
- **Quality** (backed by Abbott)

Nuclear Instruments You Can Count On

LABOR-SERVICE GMBH, Abteilung RADIO-PHARMAZEUTIKA, 6236 Eschborn/Ts, Frankfurter Str. 20, Postfach 1245
CHARCOAT T-3. No fuss, no muss, no multiple pipetting or rinsing.

You don't even have to throw in a sponge. What's more, CHARCOAT T-3 tests take only thirty minutes — start to finish — without complicated setups. You do everything in one little two-part vial. Merely pipette 0.5 ml of patient serum into each test vial, invert, incubate, centrifuge, and count the supernatant. But don't take our word for how simple and economical CHARCOAT T-3 kits are. Put one to the test. A standard kit (13 test vials) is only $20, and just a phone call away. Moreover, the extra long shelf-life of the CHARCOAT T-3 test kit makes quantity discount purchases practical. Ask about our Automatic T-3 Computer. Easy to use — no calculations. $1680 sale or lease.
Are all the radiopharmaceuticals you want readily available?
Here's a source you may not have thought of...

*CEA • CEN • SORIN*

...one of the world's leading suppliers of radiopharmaceuticals and radiochemicals, combining the radioactivity production capabilities of three nations: France, Belgium and Italy.

And CEA • CEN • SORIN is not just big... it's also far advanced in research, as well as in production and distribution methods.

Note: If you're doing investigational work in some of the newer areas of nuclear medical research, you may also be interested in CEA • CEN • SORIN's line of kits for production of compounds of short-lived isotopes such as $^{99m}$Tc and $^{113m}$In, and for radio-immuno-assay procedures.

Find out today about this other excellent source for the radiopharmaceuticals you want. For information, write or call collect: CAPINTEC INC., 527 Madison Avenue, New York, N. Y. 10022; (212) 752-2440.
Ultra-TechneKow® Generator

Simplest way to produce sodium pertechnetate Tc99m
No assembly, no clamps, no generator manipulation.

ONLY
4
STEPS
IN THIS
SIMPLE MILKING PROCEDURE

1. Attach sterile needle to plunger outlet.*
2. Place sterile, evacuated vial in elution safe and position it under needle.
3. Press plunger down so needle pierces diaphragm on evacuated vial; turn plunger slightly to lock in position. Milking will proceed automatically.
4. Release plunger to stop milking process. (Vial is now ready for calibration.)

*One needle serves for a full week. For sterility between milkings, retract needle and apply sterile needle cover.

The Mallinckrodt/Nuclear Ultra-TechneKow Generator is so modern, so simple to operate that any other system is antiquated, old fashioned, obsolete.

You receive the complete, plastic-enclosed Ultra-TechneKow Generator each week. No need to handle the generator or make tubing connections. When generator is exhausted, dispose of entire unit or return to Mallinckrodt for disposal.

Available in 4 activities:
- 50 mc
- 100 mc
- 200 mc
- 300 mc

Ask your Mallinckrodt/Nuclear Salesman for full information, or mail in the coupon.

Push Button Milking

New faster way to daily production of $^{99m}$Tc in your own laboratory
There's a gap in your nuclear capability

When you work with high intensity gamma radiation, you may be losing time and control because of the remote location of the irradiator . . . or you may be further increasing the gap in your nuclear capability by sacrificing efficiency because of the special precautions required by your present irradiator.

The most severe gap, of course, occurs when you are not working directly with high intensity gamma radiation because of its inconvenience or high cost.

Now! RMC can close your nuclear capability gap . . . . . .

Radiation Machinery Corporation has introduced the GammaMed series of gamma irradiators. Entirely self-contained, they need only a little floor space in an unrestricted lab area. And you can specify radiation intensities up to 150,000 rads/hour.

Access tubes, an irradiation chamber turntable, continuously variable exposure control, electric timers, automatic chamber return . . . all add to the convenience and versatility of GammaMed irradiators.

All of your work done without delay under your control in your facility.

And the price — far lower than you believe possible.

Write today for comprehensive technical brochure.

Radiation Machinery Corporation
1280 Route 46 • Parsippany, New Jersey 07054 • (201) 887-4700
WE BELIEVE OUR NEW BEADS IN Tri IONEX WORK TO MAKE THE BEST T-3 THYROID TEST SYSTEM AVAILABLE…but maybe we're biased.

We could quote our hundreds of customers, talk about the new larger beads, explain competitive advantages, or point to our eight years of experience, but you know the best proof is your evaluation of it in your own laboratory…we agree.

With your card or collect telephone call to our Los Angeles office, we will send you a complimentary I-125 or I-131 Tri IONEX Test System. See for yourself.
Interested in establishing T-3, T-4, Iron-Binding Capacity, Blood Volume, Thyroid Uptake, Red cell Survival or Schillings Test radioisotope programs in your laboratory? Take a look at the SG-401 SCINTIGRON. It costs $1,295.00, but most laboratories lease it for approximately $32.00 per month for 5 years, or $45.00 per month for 3 years. Technical assistance to SCINTIGRON owners comes from our 18 years of experience in the field of Nuclear Medicine. If you feel you may be ready to establish or expand the radioisotope program, call us collect. Or send a card, and ask. (213) 232-3531
complexity
simplicity!

TECHNETOPE II

SQUIBB
Introducing new Technetope® II
Squibb Technetium 99m
STERILE GENERATOR

A FAR SIMPLER GENERATOR . . .
Hooks, hangers, and handles complicate assembly, so you won't find any on Technetope II. It's so simple that, after the usual aseptic techniques, assembly consists basically of two insertions into the generator column. Then attach an eluent bottle, an evacuated collecting vial, and milk. That's simplicity.

. . . DESIGNED WITH "T.D.S." IN MIND
Time: Technetope II simplicity reduces assembly time...keeping radiation exposure to a minimum. However, proper radiation safety precautions should be maintained at all times.
Distance: Technetope II allows you to keep your distance. You don't have to be constantly near the generator because it is self-milking. And eluate collection is made at the side of the unit—away from an unshielded port.
Shielding: Technetope II has another half-value layer of lead shielding—without adding a cumbersome dispenser, additional cost, or special contract.

In addition, Technetope II is readily adaptable to tandem milking which provides high concentrations of ***Tc per ml.—another Squibb first and exclusive.

Technetope II (Squibb Technetium 99m) Sterile Generator provides a means of obtaining a sterile, non-pyrogenic supply of Technetium 99m (**Tc). ***Tc, the short-lived daughter (T½ = 6 hours) of Molybdenum 99 (**Mo, T½ = 67 hours), is obtained from the generator by periodic elution. The amount (in millicuries) of ***Tc obtained in the initial elution will depend on the original potency of the generator, while the activity obtained from subsequent elutions will depend on the time interval between elutions.

Warning: Proper radiation safety precautions should be maintained at all times. The column containing **Mo need not be removed from the lead shield at any time. The radiation field surrounding an unshielded column is quite high. Solutions of ***Tc withdrawn from the generator should always be adequately shielded. The early elutions from the generator are highly radioactive. For radiation protection, a lead shield for the collecting vial is included with Technetope II.

For additional information on this advanced generator or the tandem milking technique, please use the coupon below.

Laurel and Hardy. Inseparable. Made for each other.

The same goes for a nuclear-medicine department. Only one imaging system goes with it—is made for it—brings the department to its full potential.

Some things simply belong together.

Only the Pho/Gamma® III Scintillation Camera by Nuclear-Chicago. Only the Pho/Gamma III has the in-vivo visualization capabilities, the full range of data displays and data-manipulation accessories for today—and tomorrow.

Which is why more and more nuclear-medicine departments are going with and growing with the Pho/Gamma III. And helping to make it, now more than ever, the world's most experienced scintillation camera.

Call your Nuclear-Chicago sales engineer. Or write to us for full details on the Pho/Gamma III.
Ohio Nuclear's new Model 84FD Dual Five, is the only scanner employing reliable, digital logic, computer-type electronics.

Speeds up to 750 cm./minute produce simultaneous, opposed view photoscans in less than half the time required by other scanners.

Scan progress is visually monitored on a storage cathode ray tube, which retains the organ image until manually erased.

Simplified pushbutton controls are conveniently located on the desk console. Photo Intensity Computer (PIC) circuit provides consistent, comparable maximum film density at the push of a button. Selectable levels of contrast enhancement and background erase accommodate individual preference.

Organs are recorded full size on 14” x 17” film; whole body bone scans are also reproduced on 14” x 17” film, by means of a unique minification system.

Model 84 may be purchased with a single scanning head and later converted to a dual head unit in your laboratory.

Write for Ohio Nuclear's new brochure describing the Single and Dual, Five and Eight Inch Crystal Radioisotope Scanners.
Think of them as a loose-leaf radiopharmacopoeia.

Our radiopharmaceutical bulletins. Detailed, invaluable clinical, biochemical, and chemical information on the wide variety of diagnostic compounds now offered by Amersham/Searle Corporation.

How wide a variety? Virtually everything from arsenic-74 to xenon-133—and building. Imaging agents for in-vivo techniques involving scanners and scintillation cameras. Labelled compounds for in-vitro metabolic studies. All available now from Amersham/Searle.

And whether it’s information you get from us in print or in person, it comes from a knowledgeable source. Amersham/Searle was formed through a joint venture of The Radiochemical Centre, Amersham, England, and G. D. Searle & Co.

We therefore share in the technical excellence of The Centre in research, development, and manufacture of radiopharmaceuticals. Equally important as a resource is G. D. Searle, long a first-ranked name in pharmaceutical research and manufacture. Finally, we draw on the resources of Nuclear-Chicago Corporation (a Searle subsidiary)—a leading manufacturer of nuclear instrumentation.

So you see, we are in business to serve you as your primary source for radiopharmaceutical information and supply. For supplies and accessories for nuclear medicine.

Copies of our radiopharmaceutical bulletins are yours for the asking. As is our immediate, personalized attention to your needs. Write or call.
NEISLER now ships NEIMOTEC® Sterile Generators (99Mo/99mTc) 156 days a year to simplify your scanning scheduling.

We ship technetium 99m generators every Wednesday, every Friday, and every Sunday* so that your diagnostic needs, whatever they are today, or might become tomorrow, are likely to be met with minimum trauma. Simply tell us how many millicuries of technetium 99m you need on Monday, Tuesday, Wednesday, Thursday, Friday, Saturday and even on Sunday, and we will show you how our three-day-a-week NEIMOTEC® generator shipments can best meet your specific requirements economically.

About the Generator—This is a complete system which is easy to set-up and use. And the unique accessibility of its components allows for adjustments if required. This generator is sterile, pyrogen-free and provides routinely high yields.

Safety Considerations—The NEIMOTEC® generator itself has a well-engineered, effective shield. The eluate vial is married to its own separate lead shield and cannot accidentally leave it.

New Radiometric Assay Kit—This is a complete kit for rapid, accurate and reproducible assay and calibration of the total generator eluate. It determines total 99mTc and 99Mo activities radiometrically in a matter of minutes without transferring portions of the eluate from its vial. And no spot tests!

NEISLER Service—(1) Because we are also major suppliers of sodium pertechnetate Tc 99m solution, now calibrated to 3 P.M. New York time, we can always backstop you if required for any reason whatsoever. (2) Local NEISLER salesmen and specialists provide personalized service in virtually all areas. (3) Our Order Department is as near as your phone—call collect—
(212) 682-5057 or 5058. Our Radiopharmaceutical
Customer Service Manager (phone 212-682-5057) is
available for answering questions or providing technical
service having to do with any of NEISLER's
radiopharmaceuticals.
  Indications—Brain scanning.
  Contraindications—Should not be administered to
pregnant or lactating women, or to patients under the age
of 18 years, except when necessary diagnostic
information cannot be obtained by other types of studies
or can only be obtained at a risk greater than the radiation
exposure caused by this drug.
  Warnings—As with all radiopharmaceuticals, dose
should be limited to smallest reasonable amount
consistent with greatest value in terms of relevant
diagnostic information.
  Precautions—Approved radiation safety precautions
should be maintained at all times. Interpretation of scans
should take into consideration the possibility of
extracranial contamination with salivary secretions, and
should distinguish between abnormalities and areas of
normally high vascular activity.
  Adverse Reactions—None reported to date; however,
patients should be carefully observed.
  Dosage and Administration—Up to 10 millicuries per
patient, administered by intravenous injection. Physicians
should consult product package insert before
administering.

*Generators shipped on Sunday can be reliably delivered early
Monday A.M. in areas serviced by airports having dependable
delivery service.

The case for the classical radioisotope scanner, or...

Why does Picker keep refining and improving its basic rectilinear scanner (Magnascanner® 500), when it also has a most sophisticated high-speed scanner (Dynapix®), and two exceptional cameras (Dynacameral™ and Magnacamera®)?

Because: despite the rapid forward thrust of progress—which we ourselves aid, abet, foster and contribute to—nothing we or anyone else has done has obsoleted the basic rectilinear scanner. What basic scanners do, nothing does better, and few do as well. Examples?

For a small hospital starting a diagnostic radioisotope laboratory with a small patient load and a modest budget, there is nothing quite as appropriate as a scanner. Hence, four out of five nuclear medicine departments get started with a Magnascanner and there are now over 2500 in use throughout the world. Similarly, a Magnascanner is a most relevant choice for larger hospitals in need of an instrument with the highest resolution for diagnostic confirmation. A basic scanner like the Magnascanner is still the best device available for static-imaging applications by virtue of its very high resolution, large field of view, wide energy range, contrast enhancement, wide choice of focusing collimators, and modest cost.

None of this should imply that the Magnascanner is an untouched island in the stream of progress. Today's instrument is generations away from yesterday's. Note: (1) maximum scan speed has been increased from 200 cm/min to 500 cm/min; (2) detector can be positioned by a control on the detector head itself, and a ratemeter on the detector head facilitates and speeds location of "hot" and "cold" spots; (3) a new color photo recording system is available in addition to black and white photorecording, multicolor dot recording, and Tele deltas black dot recording; (4) push button energy window selection (in addition to manual selection) for the most common radioisotopes used in diagnosis.

And Now the Dual Magnascanner®—This instrument is essentially identical to the Magnascanner® 500 except that it has two separate opposed detectors which acquire information independently. AP and PA, or RL and LL rectilinear scans can be performed simultaneously. This capability minimizes the need for patient re-positioning and reduces the scanning time by half. Further information is available—Please write for detailed information on the Magnascanner® 500 and the Dual Magnascanner to Picker Nuclear, 1275 Mamaroneck Avenue, White Plains, N.Y. 10605. Please request file 235R.
If ever a city was born for the painter, poet and traveller, this is surely it. You'll fall in love with it the moment you knock open the door of the city at the fabulous French Quarter. The invisible gay spirit of the Crescent City takes you by the arm to guide you to and through its fabled tourist treasures . . . from the stately and pious old St. Louis Cathedral to the bouncy, noisy clash of a Jazz Band on Bourbon Street . . . from the charming old-world atmosphere of patio restaurants to the elegant settings of the age of crinoline. New Orleans is a lady, virtuous and sweet . . . New Orleans is a flirt, saucy, tempting and alluring. This is a city for gourmets; a city for collectors; a city for the young in heart and the adventurous in spirit. This is a city for everyone.

NEW ORLEANS

Plan to attend the SOCIETY OF NUCLEAR MEDICINE 16th ANNUAL MEETING — it will be rewarding. Bring the ladies too — an excellent program is arranged for their visit to the fabled Crescent City.

Then

on to the land of contrasts for now is the time for a change of pace . . . relax on her sunny Pacific Ocean beaches, or explore the forgotten cities of her magnificent Hispanic past; stroll through picturesque Indian markets, or thrill at the excitement of a "corrida" — whichever is your choice, we offer you

MEXICO

at its best with the Society of Nuclear Medicine's Post Convention Tour "Mexican Sojourn".

You will depart New Orleans on June 29th to Acapulco; on July 2nd, on to Cuernavaca and Taxco; on July 3rd to Mexico City, with its bustling millions. On July 6th, you're homeward bound — or extend your visit with Extensions to OAXACA, or to YUCATAN — Superior Deluxe Accommodations, jet air transportation, gourmet meals in Acapulco and Taxco, all transfers and sightseeing for ONLY $310.00, twin basis, basic program.

For more information and color brochure write, wire or call

today be independent!

make your own
99mTc Sulfur Colloid when you
want it...when you need it

Each kit contains sufficient
material for 5 colloid preparations.
New Tesuloid™
Technetium 99m—Sulfur Colloid Kit

...utilize $^{99m}$Tc eluate from your sterile generator
...make as many doses as you want when you want
...keep dollar loss from product decay to a minimum
...more convenient and economical
...store kit anywhere — it’s not radioactive*
...colloid contains no dextran... no rhenium

Package contains:
5 vials (3 cc. each) Sterile Sulfur Colloid Reaction Mixture. Each cc. of aqueous solution provides 4 mg. sodium thiosulfate, 3 mg. gelatin, 8.5 mg. potassium phosphate and 0.93 mg. disodium edetate. Contains no preservative.

5 Unimatic® Disposable Syringes (2 cc. each) of Sterile 0.25N Hydrochloric Acid Solution. Each cc. of aqueous solution provides 9 mg. hydrochloric acid.

5 Unimatic Disposable Syringes (2 cc. each) of Sterile Buffer Solution. Each cc. of aqueous solution provides 35 mg. sodium biphosphate and 10 mg. sodium hydroxide.

Warning: Solutions of sodium pertechnetate $^{99m}$Tc withdrawn from the generator should always be adequately shielded. Early elutions from the generator are highly radioactive.

Precaution: Radiopharmaceuticals should not be administered to pregnant women or patients under 18 unless the information to be gained outweighs the hazards.

*However, adequate shielding of the Technetium 99m—Sulfur Colloid solution should be maintained.

Please send me complete information on new Tesuloid™ Technetium 99m—Sulfur Colloid Kit.

Please attach this coupon to your letterhead and mail to Medotopes Customer Service Department, P.O. Box #7, East Brunswick, New Jersey 08816.
This may be the first you have heard of us, but you'll be hearing a lot from CAPINTEC in the future. Good things. Important, new things. About the products and services we offer to nuclear medicine, nuclear research and the nuclear industry.

CRC-2? Just about the finest ever in radioisotope calibrators, affording simplicity, accuracy and unmatched flexibility. The special construction features of the CRC-2 Calibrator mean complete geometry-independence, complete electronic stability. And because it has the largest well size of any calibrator now available (3" x 12"!), it will accommodate virtually any volume in virtually any type of container. Turn one knob, and there's an instantaneous digital readout — in microcuries, millicuries or curies — of the total activity (gammas and betas) of any isotope, from the lowest energy to the highest you might want to use — from 0.1 microcuries to 10 curies. No need for meticulous placement within the well. No dilutions. No calculations. No adjustments.

Verify radiopharmaceutical doses; assay generator eluates; determine the activity of an entire generator, if you want. With the new CRC-2 Calibrator, from CAPINTEC.

For further information, write or call collect: CAPINTEC INC., 63 East Sanford Blvd., Mt. Vernon, N. Y. 10550; (212) 752-2440.

This “cow” stands out from the herd!

This is Pertgen-99m, the cow that doesn’t leak. Nothing comes out until you’re ready to milk it.

Yields are consistent and high—an unbeatable combination!

Safety—underneath the Pertgen-99m Generator is the Rayshield™, Abbott’s exclusive Radioisotope Shielded Dispensing Unit, that keeps radiation to operating personnel at a minimum.

Convenience—the protection afforded by the unique Rayshield means that Pertgen-99m can be used on the lab bench—there’s no need to hide this system behind the bricks!

Economy—because Pertgen-99m is precalibrated, you get more useable activity at no increase in cost!

SODIUM PERTECHNETATE Tc 99m

Abbott Laboratories North Chicago, Illinois 60064

World’s Leading Supplier of Radio-Pharmaceuticals

LABOR-SERVICE GMBH, Abteilung RADIO-PHARMAZEUTIKA,
6236 Eschborn/Ts, Frankfurter Str. 20, Postfach 1245
A 70-year old man was admitted unconscious to the intensive care unit. Studies failed to reveal evidence of a myocardial infarction and the X-ray was not revealing. A pulmonary infarct was suspected and this diagnosis was established by a lung scan.

His posterior view scan above, showing diminished uptake in the left lingula and right lower lobe, was made with Macroscan-131. This product has many diagnostic uses:

- **Pulmonary embolism, suspected:** To confirm (or rule out) its occurrence.
- **Chronic pulmonary tuberculosis:** To estimate unilateral and regional function and perfusion of the lungs.
- **Emphysema:** To evaluate the decreased regional blood flow that occurs without obstruction of vessels.
- **Pneumonitis:** To evaluate the decreased regional blood flow that occurs with obstruction of vessels.
- **Lung Tumors:** To evaluate the regional ischemia resulting from compression or obstruction of pulmonary arteries.

**Macroscan™-131**

AGGREGATED RADIO-IODINATED 131I ALBUMIN (HUMAN)

Surgery and/or other therapy for lung disorders:
To evaluate the effectiveness of therapeutic measures.

Macroscan-131 is sterile and non-pyrogenic.
It is ready to use and should not be heated prior to use.

**INDICATIONS:** For scintillation scanning of the lungs to evaluate total, unilateral, and regional arterial perfusion of the lungs.

**CONTRAINDICATIONS:** Radio-pharmaceutical agents should not be administered to pregnant women or to persons less than 18 years old unless the indications are very exceptional.

**PRECAUTIONS, SIDE EFFECTS:** Care should be taken to administer the minimum dose consistent with safety and validity of data. The possibility of an immunological response to albumin should be kept in mind when serial scans are performed. There is a theoretical hazard in acute cor pulmonale, because of the temporary small additional mechanical impediment to pulmonary blood flow. A possible case of urticaria has been related to a similar preparation. The thyroid gland should be protected by prophylactic administration of concentrated NaI iodide solution.

where people count!

A dosimetry badge is a personal thing; the health, the very life of the wearer may depend on it. That's why Tracerlab people give so much personal care and attention to each and every film badge that passes through their hands, before and after computer processing and quick return to you. And more dosimetry badges pass through their skilled hands than any other monitoring service. Yours should be among them.

You can also count on Tracerlab people for the safest, most reliable radioactive sources in the world — a wide selection of stock or custom types for standardization and analysis. For dependable products and services in the life sciences and health physics, including a broad range of radioanalytical services, come to Tracerlab — where people count!

TRACERLAB
WALTHAM, MASSACHUSETTS 02154
Contraindications: Radiopharmaceuticals should not be administered to pregnant women or to persons under the age of 18 years unless the indications are very exceptional. Because iodide is excreted in human milk, aggregated radioalbumin should not be administered to nursing mothers.

Side Effects and Precautions: There have been no reported cardiovascular or other untoward effects attributable to Albumotope—LS. Extensive clinical use of Albumotope—LS has not borne out the hypothetical possibility that particles of large size might induce deleterious cardiovascular or cerebrovascular effects. The product appears to possess no antigenic properties. One patient with a known history of angioneurotic edema, who had been given Lugol’s solution in conjunction with aggregated radioalbumin similar to Albumotope—LS, developed urticaria.

For full prescribing information, see package insert.

Available: As a sterile, nonpyrogenic, aqueous suspension. Each cc. contains approximately 0.5 mg. aggregated human serum albumin labeled with iodine 131. Not less than 90% of the aggregates are between 10 and 90 microns and none are more than 150 microns in size. The preparation also contains 0.3% (w/v) benzyl alcohol as a preservative. The potency ranges from 250 to 450 microcuries per cc. on date of assay.

SQUIBB Division of Nuclear Medicine East Brunswick, New Jersey 08816

we wouldn't leave “well enough” alone!

improved Albumotope™-LS
Aggregated Radio-Iodinated (I^{131}) Albumin (Human) for Lung Scanning

introduced by Squibb... improved by Squibb

- Reduced Protein Content
  Squibb has reduced the amount of protein by 50% while maintaining good lung scans.

- Reduced Supernatant Activity
  Squibb has sharply reduced the amount of radioactivity in the supernatant, decreasing the possibility of liver interference with the lung scan.

- Reduced Unbound Iodine
  Squibb has substantially reduced the amount of unbound iodine 131, effectively reducing the problem of blood background radioactivity. Albumotope—LS—a good example of Squibb leadership in radiopharmaceutical research and development. Some people won't leave "well enough" alone.
The tiny
Unlike other scintillation cameras, Baird-Atomic's Autofluoroscope features computer-type memory. And that's saying a lot.

It says our non-volatile magnetic core memory can store raw digital data for each picture element. And restore image plane uniformity. It lets you flag any areas of the picture for numerical integration in dynamic studies. It permits fast storage on magnetic tape to provide more data points in dynamic studies. It lets you play back patient data in its original form at any time. Instantly. And because of magnetic core memory, the picture has the same integrity as the raw data. The fact is, magnetic core storage makes the Autofluoroscope a fundamentally more practical and objective tool. What's more, it's faster and easier to use in all procedures than other cameras. So if you're going to buy or lease an imaging device, you should talk to Baird-Atomic before you make your final decision. You owe it to yourself to fully understand why the tiny difference will make such a big difference to your program. Naturally, if you're not already thinking about the Autofluoroscope, we may not change your mind. But we'll give you a tough decision to make. Call for an appointment. 33 University Road, Cambridge, Massachusetts 02138, Telephone: 617 864-7420. Baird-Atomic Europe, The Hague, The Netherlands. Baird-Atomic Limited, Hornchurch, England.
Some things simply belong together.

What's Lorre without Greenstreet? Unheard of!

Equally inconceivable: a department of nuclear medicine without a scintillation camera. The two are made for each other.

And when the scintillation camera is the scintillation camera—the Pho Gamma® III by Nuclear-Chicago—then there's the perfect melding of diagnostic discipline with sophisticated system.

In-vivo isotope visualization then becomes a complete, rewarding reality. With Pho/Gamma III’s array of data display and manipulation accessories, that reality becomes a permanent, invaluable part of departmental technique.

Pho/Gamma III is, after all, the world’s most experienced scintillation camera. An undeniable fact which dictates that you should find out all. From your Nuclear-Chicago sales engineer. Or by writing to us.
