The Journal of Nuclear Medicine will publish original articles in the following areas: (1) basic sciences, (2) in vivo function studies, (3) in vitro studies, (4) radionuclide imaging, (5) clinical studies, and (6) therapeutic applications of radionuclides. The category in which an article is submitted must be marked at the top of each manuscript. Articles must describe definitive and original studies which are completely documented by both references to the literature and description of the techniques used. Articles are accepted for publication on the condition that they are contributed exclusively to this journal. Authors alone are responsible for the technical accuracy of their manuscripts.

In addition to regular full-length articles, the Journal will consider manuscripts in the following areas:

Preliminary Notes communicating information about “works in progress.” If accepted, these may appear in the second month following submission. The text may not exceed 1,200 words. Authors may submit (1) two illustrations, (2) two tables, or (3) one table and one illustration. An additional 400 words of text may be submitted if no illustrations or tables are required.

Case Reports or brief clinical notes. More than one patient may be described if there are obvious similarities in the phenomena or reactions described. The requirements for length of a case report are the same as those of Preliminary Notes.
