1255 Insulin Clamp for Myocardial [18F]FDG PET
1278 Noninvasive, In-Vivo Measurements of Hepatic Cardiac Iron
1346 Regional Glucose Utilization in Myocardial Ischemia
1390 Technetium-99m-MDP Uptake in Hepatic Necrosis
1402 Radiation Safety Considerations

A Full Table of Contents Begins on Page 4A, Annotations on Pages 7A-8A

The Official Publication of The Society of Nuclear Medicine, Inc.
Euglycemic Hyperinsulinemic Clamp and Oral Glucose Load in Stimulating Myocardial Glucose Utilization During Positron Emission Tomography

To compare the effect of glucose loading with insulin and glucose infusion on PET FDG myocardial scan image quality and regional myocardial glucose utilization rates, eight patients with angiographically documented coronary artery disease were studied... Page 1255

Editorial: Euglycemic Hyperinsulinemic Clamp and Oral Glucose Load in Stimulating Myocardial Glucose Utilization During Positron Emission Tomography... Page 1263

Metabolic Cardiac Imaging in Severe Coronary Disease: Assessment of Viability with Iodine-123-Iodophenylpentadecanoic Acid and Multicrystal Gamma Camera, and Correlation with Biopsy

Fifteen patients with coronary artery disease and resting left ventricular ejection fractions ≤ 0.35 underwent resting metabolic cardiac imaging utilizing 123I-iodophenylpentadecanoic acid... Page 1269

Noninvasive In-Vivo Measurement of Hepatic and Cardiac Iron

A noninvasive technique based on nuclear resonance scattering was used to measure iron in the liver and hearts of 12 patients with Cooley's anemia... Page 1278

Gastric Emptying and Intragastric Distribution of Oil in the Presence of a Liquid or Solid Meal

A radioisotopic marker for liquid fat, 99mTc-(V)thiocyanate, was used to compare gastric emptying and intragastric distribution of oil to that of aqueous liquid and solid meal components in eight volunteers... Page 1283

Simultaneous Assessment of Bolus Transport and Contraction Parameters in Multiple Swallow Investigations

Twenty-nine patients were simultaneously investigated with esophageal scintigraphy and manometry in order to correlate standard manometric parameters with the quantitative and qualitative characteristics of liquid and semi-solid bolus transport... Page 1291

Clinical Comparison of Technetium-99m-Teboroxime and Thallium-201 Utilizing a Continuous SPECT Imaging Protocol

A prospective study compared teboroxime to 201TI in 17 patients suspected or known to have coronary artery disease. All patients were studied utilizing a single-detector SPECT camera and treadmill exercise with both agents within a 2-wk period... Page 1304

A Comparison of Brain Perfusion SPECT in Cocaine Abuse and AIDS Dementia Complex

The scintigraphic patterns of AIDS dementia complex patients and cocaine polydrug users were compared with normal control subjects using 99mTc-HMPAO SPECT... Page 1312

Dose Estimation in Strontium-89 Radiotherapy of Metastatic Prostatic Carcinoma

The absorbed dose delivered to bone metastases during 89Sr radiotherapy was estimated in four patients with metastatic prostatic carcinoma... Page 1316

Factors Influencing Serial Measurements of Cardiac Volumes by Count-Based Methods: Effects of Elevated Catecholamines, Position, and Exercise on Technetium-99m-Blood Radioactivity Concentration

The effects of elevated epinephrine, posture, and exercise on 99mTc-labeled blood radioactivity concentration were studied in 15 young and 14 older healthy males... Page 1324

Evaluation of Infectious Diabetic Foot Complications with Indium-111-Labeled Human Nonspecific Immunoglobulin G

The validity of 111In-labeled human nonspecific immunoglobulin G scintigraphy was studied in 16 diabetic patients with foot ulcers, gangrene or painful Charcot joints. Plain radiographs, conventional bone scan and 111In-IGG images were recorded in all patients... Page 1330

Emission Tomography for Assessment of Diffuse Alcoholic Liver Disease

A method of quantitative liver SPECT was compared with planar scintigraphy in a group of 14 alcoholic patients with proven liver disease and seventeen controls... Page 1337

The Relationship Between Myocardial Blood Flow and Glucose Uptake in Ischemic Canine Myocardium Determined with Fluorine-18-Deoxyglucose

FDG was injected in 10 fasted, anesthesized, open-chest dogs 10 min after the onset of ischemia. Serial blood samples were obtained to measure FDG in plasma. Tracer-labeled microspheres, used to measure myocardial blood flow, were injected 10 and 40 min postocclusion... Page 1346

Interspecies Variation in Biodistribution of Technetium (2-Carboxyphenyl)-2-Isocyanopropane)

Toxicologic and dosimetric evaluations of 99mTc-CPI, along with pharmacologic evaluations of the compound's radiochemical integrity, were performed to ascertain the nature of interspecies differences and to
determine the ability of the guinea pig model to predict the behavior of the agent in humans. Page 1357

Establishment and Characterization of Monoclonal Antibodies Against an Octahedral Gallium Chelate Suitable for Immunoscintigraphy with PET

With use of the Farr assay, binding studies with gallium-labeled chelate and three clones of anti-chelate Mabs showed that none of the Mabs were able to precipitate more than 50% of the gallium-chelate. Page 1366

In-Vivo Identification of Tumor Multidrug Resistance with Tritium-3-Colchicine

An in-vivo distribution of radiolabeled [3H]-CHC was measured in immuno-suppressed mice bearing xenografts of colchicine-resistant and sensitive tumor cell lines. Page 1373

Effect of Carbohydrate Modification on the Localization of Human Polyclonal IgG at Focal Sites of Bacterial Infection

To evaluate the specific role of Fc receptor binding as a mechanism of localization, the Fc region of IgG was modified by endoglycosidase-F digestion and periodate oxidation, thus reducing the binding of IgG to Fc receptors. Page 1378

Delayed L-Phenylalanine Infusion Allows for Simultaneous Analysis and Improved Evaluation of Specific-to-Nonspecific Fluorine-18-DOPA Uptake in Brain

An unlabeled amino acid, L-phenylalanine, was infused into the brains of rhesus monkeys 75 min after 18F-DOPA administration to increase the sensitivity of 18F-DOPA for imaging presynaptic dopamine systems. Page 1396

Radiation Safety Considerations for Post-Iodine-131 Thyroid Cancer Therapy

External exposure rates were measured on 27 patients using a calibrated ionization survey meter. Patients’ exposure rates were measured at the time of release from hospital and 2-7 days post-discharge. Page 1402

Optimization of the Follow-up Measurements of Bone Mass

A model to estimate the length of confidence intervals for observed changes in bone mass is presented. Page 1406

Left Ventricular Perfusion and Performance from a Single Radiopharmaceutical and One Camera

Twenty-six patients with positive stress thallium studies within 2 wk and 8 volunteers underwent stress/rest combined LV function studies using teboroxime and a small field of view, portable multocrystal scintillation camera with a high count rate. Page 1411

Lung Scan Interpretation: A Physiologic, User-Friendly Approach

Ventilation/perfusion lung scans from 105 patients who had recently undergone a ventilation study with 133Xe gas, a perfusion study with 99mTc-MAA and pulmonary angiography were interpreted once by the physiologic algorithm and once with the Biello criteria by each of two observers. Page 1417
