By eliminating the disadvantages of earlier methods, the Triosorb Sponge has achieved a real breakthrough in thyroid testing. It is an in vitro test unmatched in accuracy, speed and convenience.

Accuracy: Because factors such as red blood cells and exogenous iodine have been eliminated from consideration in the Triosorb Test, it is unmatched in accuracy.

Speed: With only 3 washes and no need for double pipettings, shakers, or incubators, the Triosorb Test can be
more rapidly performed than any other T-3 test.

**Convenience:** Triosorb is in a disposable kit ready for immediate use at room temperature, making it the simplest and most convenient thyroid function test to perform.

McAdams* reported that “The resin sponge (Triosorb) technique is superior to the erythrocyte method for performing the T3 test in terms of simplicity, convenience and elimination of errors characteristic of the erythrocyte procedure.”

Triosorb is available to all doctors, hospitals and clinical laboratories—AEC licensing is not required. Because Triosorb will enable far more screenings to be performed, this procedure may soon become as standard as today’s blood counts and urinalyses.

The demonstrable advantages of a dual 5-inch crystal scanner should be investigated by all those with a high clinical load who desire high resolution, rapid scans of both large and small organs or of the whole body.

The two scanning heads, exactly opposite each other, have separate, and complete electronics and print-out so that the data collected by each crystal may be used separately, in coincidence, or additively.

Mechanical and electronic specifications are the same as for our other large-crystal radioisotope scanners Models 54F and 54H:

- Scanning speeds continuously variable to 200 inches per minute (500 cm/min.);
- Adequate shielding even for high energy gamma emitters (up to 3 inches lead and 1 inch steel);
- High resolution crystals (9 per cent or better);
- Accurate, reproducible scanning speeds and line spacing; no scalloping at any speeds;
- Low background crystals (2 inch thick pure NaI light pipe);
- Gamma-graphic (patent pending) or slit mask photoscans;
- Unequivocal one year warranty anywhere in USA or Canada.

This unparalleled radioisotope scanner is priced at $28,750 with delivery in 90 days guaranteed.
Demonstrated Leadership from the specialist

The TECHNEKOW® Shielded Dispenser

A NEW COMPACT "HOT LAB"
by NCC

A Shielded Self-Contained System for Producing Sterile Technetium from the TechneKow Source Generator

Completely lead shielded, the new E-1810 Dispenser provides a semi-automatic system for producing a sterile solution of sodium pertechnetate with minimum radiation exposure. It eliminates the need for awkward shielding and handling devices, and enables the smaller laboratory to use technetium on a daily basis.

Insert generator into shielded upper chamber of Dispenser, where it may be stored for daily use. Each day the internal disposable processing parts are replaced with a fresh sterile set.

Operate the TechneKow Shielded Dispenser in 3 Easy Steps

1. Pour eluting solution into generator and replace shielded cap.

2. When solution has passed through the TechneKow, open dispenser door, reach in and lift up processing unit to activate operation. The solution automatically passes through a sterilizing filter and is injected into a sterile, pyrogen-free bottle.

3. Remove bottle with its shielded jacket. Solution is ready for calibration.

The NCC TechneKow Shielded Dispenser is of heavy welded construction with polished chrome plating. A two-inch thick lead shield surrounds the TechneKow source generator. Lead shielding on the walls and door of the lower processing chamber keeps radiation at a minimum. Disposable processing parts are available in kit form.

A Valuable Addition To Your Professional Library

Journal of

NUCLEAR

MEDICINE

AN IMPORTANT NEW JOURNAL

featuring

Original articles in clinical medicine, basic and clinical medical research, physics and chemistry dealing with the use of isotopes in humans, and articles on related subjects. The latter includes dosimetry, instrumentation, protection, techniques, biologic effects contributing to the use or effects of isotopes in clinical medicine or the clinical effects of ionizing radiation.

What's new and great about our bench-top system for routine liquid scintillation counting?

Yes.

Nuclear-Chicago's Model 6850 Unilux™ System measures only 19 in. high x 31 in. wide x 23 in. deep. It offers convenient, highly accurate counting of up to 100 samples—automatically. This workhorse of the laboratory can be set up for counting in less than five minutes and costs about half as much as many conventional systems. Get complete information on the 6850. Consult your Nuclear-Chicago sales engineer or write to us.
Dynamic clinical studies using radioisotopes:

Are you interested but don’t know quite where to start?

Then start here.

First let us admit that the dynamic clinical techniques which use radioisotopes for studying various bodily functions are more complicated than well counting or even scanning procedures. Undeniable.

But these methods are valuable, providing either confirmatory clinical data or, in some instances, information which just cannot be obtained by any other means. Long-established applications of these techniques include, for example, renal function studies, cardiac output determinations and hepatic function assessment. Or perhaps the newer techniques such as cerebral blood flow or pulmonary function would be of interest.

Whatever your interest, we can minimize the technical difficulties of getting into this field.

Our offer: to work with you in any and every way to make your entry into this area as painless as possible. Specifically, we would be happy to talk with you about these methods, to provide the necessary information on existing procedures, to help you plan your radiotracer studies, to assist in interpreting results, and to aid in the training of your staff in all phases of radioisotope dynamic function methodology. Or, to work with you in any other way that you may wish. With no obligation.

Then it will come as no surprise that we can also help you select the equipment that makes sense for your needs. And to begin with, this can be a relatively simple outfit; your first commitment can be limited to the basic equipment since refinements can be added easily as needed. You should also know that our line of instruments for dynamic function work of every kind is unmatched in diversity or quality.

So, an invitation: call your Picker Nuclear representative, or drop us a line. Start a dialogue.

Picker Nuclear: 1275 Mamaroneck Avenue, White Plains, New York 10605
ALBUMOTOPE®-LS
Squibb Aggregated Radio-Iodinated (I131) Albumin (Human)

FOR EARLIEST EVIDENCE OF PULMONARY EMBOLISM...

A unique diagnostic feature of the lung scan technique that employs Albumotope-LS as the tracer is its capacity to display ischemic areas produced by small pulmonary emboli before evidence of infarction or ischemia is demonstrated in standard chest x-rays.

This method has been found to be a valuable adjunct to selective pulmonary arteriography with the advantages of being readily available, reliable, simple, direct and free from morbidity.

Albumotope-LS meets all the requirements for the ideal radiopharmaceutical for the scanning of pulmonary infarcts as described by Quinn et al."

Dosage and Scanning Procedure: Recommended scan doses of 150 to 300 microcuries of aggregated radioalbumin depending on the instrumentation available and the technics employed. Scanning immediately follows administration of intravenous injection. Patient may be placed in a prone or supine position.

Side effects and Precautions: There have been no reported cardiovascular or other untoward effects attributable to Albumotope-LS. The product appears to possess no antigenic properties. One patient with a known history of angioneurotic edema, who had been given Lugol's solution in conjunction with aggregated radioalbumin similar to Albumotope-LS, developed urticaria. Extensive clinical use of Albumotope-LS has not borne out the hypothetical possibility that particles of large size might induce deleterious cardiovascular or cerebrovascular effects.

Radioisotopes should not be used in pregnant women, nursing mothers, or in patients under 18 years of age unless indications are very exceptional.

Available: As a sterile, pyrogen-free, aqueous suspension. Each cc. contains approximately 1 mg. aggregated human serum albumin labeled with 800-1500 microcuries of iodine-131 at time of manufacture. Also contains 0.9% benzyl alcohol as a preservative.

FROM LITTLE, BROWN

RADIOISOTOPES AND CIRCULATION

Edited by Gunnar Sevelius, M.D.
By 17 Authors

"... an excellent and valuable attempt to present an up-to-date review of the use of isotopes and details of methodology involved for the study of the circulatory system."—The American Journal of Cardiology

17 pioneers in the field discuss instrumentation, data interpretation, regional blood volume measurements, cardiac output, and coronary, renal, and liver blood flow, at the same time pointing out the basic physical and physiological concepts underlying radioisotope methods.

RESPONSE OF THE NERVOUS SYSTEM TO IONIZING RADIATION

Edited by Thomas J. Haley, Ph.D., and Ray S. Snider, Ph.D. By 109 Authors

The proceedings from the Second International Symposium on the Response of the Nervous System to Ionizing Radiation, this book sheds light on the relationship between ionizing radiation and the nervous system and on the use of ionizing radiation as a tool for investigating basic nervous system functions.

"... a vital addition to the literature of the field."—American Journal of Medical Sciences

TRANSISTORIZED GM COUNTING SYSTEM

The finest RESEARCH-TEACHING Radiation Measurement System available.
RELIABLE . . . RUGGED . . . QUALITY WORKMANSHIP
This scaler is now being used by hundreds of research laboratories and schools for experimentation and teaching.

**SCALER**
300-3000 Volts, adjustable high voltage
1 μsecond resolving time
5 μA pulses can be scaled
push button aural speaker
ing 999,999 total counts
Transistorized printed circuit boards

**GM PROBE**
Chrome plated rugged GM tube housing

**GM TUBE**
1.4-2 mg/cm² end wind window GM tube

**SAMPLE MOUNT**
Cast Aluminum housing with 7 position internal shelf system lined with %
plastic to reduce Bremsstrahlung effect.

**TIMER**
Accurate dual mechanical timer, preset and elapsed time from 1 sec. to 60 min.

$795

Complete line of instruments, modules, automatic systems and accessories listed in new catalog.
Write to P.O. Box 312, Encino, California, or Telephone, Area Code 213, 787-1722.

Manufactured exclusively for NUCLEAR SUPPLIES by the world's first company to successfully build transistorized nuclear equipment, Kobe Industries Corporation of Japan.

CERTIFIED TAGGED CHEMICALS
PRECISION REFERENCE SOURCES
RADIOANALYTICAL SERVICES

From fast-delivery "off-the-shelf" compounds to the most complex custom synthesis, (choose from over 700 varieties!), ChemTrac provides certified tagged compounds of the highest purity! Guaranteed top quality, complete analytical data, (and desirable quantity discounts!) represent only a few of many user benefits!

Write or phone for a FREE copy of ChemTrac's 32-page Catalog listing all products, services, and prices!
In nuclear medicine, the CS-500 Medical Scanner is a valuable clinical tool for organ or tumor visualization, providing a powerful adjunct to the diagnostic skills of the physician.

The CS-500 features photorecording on X-ray film and teledeltos paper recording to display the distribution and concentration of isotopic labeled compounds localized in selected organs and areas of the human body. Studies utilizing the most recent scanning techniques with newly developed radioactive compounds may be done accurately and quickly.

Truly significant differences are revealed, even at low count rates, by the electronic elimination of background, and expansion of the remaining data photographically over the entire contrast curve.

Mechanically, the CS-500 is simple to operate. Either a unidirectional or a bidirectional mode may be used to direct the scanning movement of the probe in the horizontal plane. The height of this scanning plane above the subject is push-button controlled.

For PENETRATING ANALYSIS, the clinician can have confidence in the CS-500 Medical Scanner because of its proven performance in scores of leading medical institutions throughout North America.

Write to the Nuclear Instrument Department for brochure CS-500.

More and more users are looking to Nuclear Consultants Corporation for the latest developments in radiopharmaceuticals. Whatever your need, whenever it arises, you can depend on NCC for demonstrated leadership and service.

Chlomerodrin-Hg\textsuperscript{197}

Chlomerodrin-Hg\textsuperscript{203}

- Proven brain and renal scanning agents. Hg\textsuperscript{197} available at lower cost through NCC's "Controlled Decay" program.

1-Mercuri-2-Hydroxypropane-Hg\textsuperscript{197}

- For improved spleen scanning. Much simpler and more convenient than heat treating tagged red cells.
- MHP-Hg\textsuperscript{203} also available for experimental use.

Iodine-1125

- I-125 is a longer-life isotope than I-131, and offers significantly lower radiation dosage to the patient. Available as tagged albumin and other iodinated compounds.

Technetium-99m

- For Scanning Brain...Thyroid...Liver...Lung
- TechnoKow \textsuperscript{®} generator

- Supplies ample material as sodium pertechnetate for daily use. Economical for as few as seven or eight brain scans per week. New #1810 Shielded Dispenser available — simple semi-automated method of obtaining sterile solution.

"Instant Technetium"

- Sodium pertechnetate in sterile, pyrogen-free solution permits immediate use without the necessity for "milking," sterilization, or calibration.

Technetium-Sulfide Colloid

- In sterile, pyrogen-free form, reported as providing excellent liver scans. Also usable for lung scanning following the technique of Quinn.

EXCELLENCE TIMES TWO

CLINICAL WORKHORSE. One side of Pho/Gamma™, the sensitive, high-speed scintillation camera from Nuclear-Chicago. Proved clinical usefulness for large patient loads. Three to ten times faster than our own Pho/Dot® isotope scanner. Result: economy for hospitals with heavy scanning schedules.

THE BEST OF BOTH. For clinical diagnosis. For research. A single, field-tested, performance-proved instrument. One way to get both isotope-distribution pictures and stop-motion images of dynamic processes with unprecedented speed and sensitivity.
