

jnm / LETTER FROM THE EDITOR

Once again the end of the year is approaching and the December issue of the *Journal* has come off the presses, signifying the completion of another volume. During 1977 the task of our reviewers has increased as the complexity of the many disciplines in nuclear medicine has increased. In their evaluations and judgments of manuscripts, our reviewers have met this challenge and have done a superb job. They continue to be the most important segment of our staff, and the quality of each issue reflects their dedication to the present and future of nuclear medicine.

It is with pleasure that the editor takes this opportunity to express his appreciation and gratitude for the indispensable contributions of the reviewers. We are pleased to acknowledge those members of our Society and the nonmembers who participated in the reviewing process during 1977.
