THE SOCIETY OF NUCLEAR MEDICINE
20th ANNUAL MEETING

June 12–15, 1973
Americana Hotel
Miami Beach, Florida

ANNOUNCEMENT AND CALL FOR ABSTRACTS FOR SCIENTIFIC PROGRAM

The Scientific Program Committee welcomes the submission of abstracts of original contributions in nuclear medicine from members and nonmembers of the Society of Nuclear Medicine. Papers will be considered on the following subjects: Basic Science Aspects of Nuclear Medicine, Clinical Diagnosis, Clinical Investigation, Education and Administration, Nuclear Instrumentation, Radiation Biology, Radioisotope Therapy and Radiopharmaceuticals.

In addition to these conventional listings, the committee will attempt to establish scientific sessions that are disease oriented. Basic science contributions regarding related instrumentation, radiopharmaceuticals, animal and in vitro studies as well as clinical investigation proposals will be welcomed for these "mini-seminars". The proposed subjects for this year are:

- Salt and Water Balance
- Jaundice
- The Liver Mass
- Renovascular Disorders
- Congenital Heart Disease
- Acquired Heart Disease
- Cerebrovascular Insufficiency
- Hydrocephalus
- Thrombosis and Related Conditions
- Obstructive Pulmonary Disease
- Autonomous Thyroid States
- Benign Bone Lesions

The submitted abstract must concern completed work which must be substantiated with supporting data. Works-in-progress will be accepted for presentation at separate sessions. The deadline for receipt of these will be announced at a later date. All regular abstracts must be postmarked no later than January 10, 1973.

GUIDELINES FOR SUBMITTING ABSTRACTS:

Abstracts must be submitted in the following format to receive consideration. They are to be typed on the official abstract form which can be obtained by writing The Society of Nuclear Medicine, 211 East 43rd Street, New York, N.Y. 10017. The instructions on the forms must be followed exactly if the abstract is to be considered. The original and five copies must be submitted.

Each abstract must contain the name(s) of the author(s), the institution(s), and the mailing address of the author presenting the paper. Underline the name of the author who will present the paper.

Each abstract must contain the following information in this order:

1. Purpose of the study
2. Methods used
3. Results (Pertinent supporting data are mandatory)
4. Conclusions

Abstracts that are accepted will be published in the June 1973 issue of the Journal of Nuclear Medicine. Supporting data (charts, graphs, figures, tables, formulas, etc.) consisting of a maximum of three type-written pages are required in order to have any abstract reviewed for presentation at the meeting. This material will not be published.

Send the original abstract form, supporting data, and the five copies to:

Leonard M. Freeman, M.D.
Chairman, Scientific Program Committee
Hospital of the Albert Einstein College of Medicine
1825 Eastchester Road
Bronx, New York 10461

DEADLINE: January 10, 1973

pamphlet 9, radiation dose, \[^{99mTc}\text{-selenomethionine}\]

Modulation transfer function
focusing collimator, energy dependence, 19, 115
multiple gamma figures of merit, 419*
parallell-hole collimator, computer program, 467*
\[^{99mTc}\text{ and }^{111mTc}\text{Xe, three camera collimators}\], 481*
Radiation therapy
effect on bone lesions, 4Ca and 8Sr kinetics, 747

Radiocardiogram

see Heart

Radioimmunoassay
ACTH, 438*
carcino embryonic antigen, 788*
C-reactive protein, 418*
description, applicability, 872*
electroosmophoretic, fetal alpha globulin from hepatoma, 644
α-fetoprotein, 141*, 783*
hepatitis associated antigen, 454*
hepatitis-associated antigen, electroosmophoretic, 425*, 599
inulin, 145*-inulin stability, 621
plasma renin activity, 804

Radioisotopes

"overdose" procedures, 866*

Record keeping
data retrieval system, 572
35 mm film system, 868*
scan reproduction, 289

Red blood cells
alcoholic, 14C-formaldehyde oxidation, in vitro, 473*, 677
14Cr- and 144Tc-, agglutination in macroglobulinaemia, 397
14Cr-, labeling and centrifugation, syringe technique, 163
14Cr-, labeling, effect of corticosteroid therapy, 872*
14Cr-, rate of loss from spleen, 686
14Cr-, radio-positive, antibody evaluation, 446*
14Cr-, spleen capacity test, 430*
production in anemia, non-steady state, 111
15Se- and 15Fe-, handling by abnormal spleen, in rats, 420*
survival, standardization, 573
144Tc- and 144Cr-, red cell volume, 443*
144Tc-, comparison of agents from four preparation procedures, 809
144Tc-, preparation, 399, 400
144Tc-, red cell volume, 760
uptake of 144In- and 144Fe-transferrin, 786*

Renal, renography

see Kidney

Resolution
focused collimator, energy dependence, 19
improvement, nonlinear digital techniques, 441*
index of, focusing collimator, 115
optimization of parallel-hole collimators, scintillation camera, 411*
scintillation camera, threshold preamplifiers, 169
spatial, camera, electronic signal processing and movable filter plate, 784*
whole-body imaging, scintillation camera, 903

Reticuloendothelial system

see specific organs

Rhenium
-heptasulfide, in 144Tc-S colloid preparation, 287
Rh-factor
antibody evaluation, 14Cr-RBC, Rh positive, 446*

Rubidium-86
content, 14Mo-144Tc generator eluate, 388

Salivary glands
Ga-citrate scans, 196

Scanner
-computer dual data-scanning system, 413*
-computer system, Intertechnique model 22, 461*
dot scanning, 573
dual and single detector 144TcO4- thyroid uptakes, 159
dual-crystal, anterior landmark recording, 281

line spacing, ratemeter averaging and lesion detection, 191
low counting-rate data smoothing, 528
minification for rapid, low information density scanning, 231
multiple gamma transition line summing, 419*
phantom, machine evaluation, 865*
transmission, irregular bones, 13
unidirectional scanning, 571

Scanning
dual radionuclide, 144Tc and 111In, 431*
effect of data smoothing on observer performance, 752
emergency procedure efficacy, 436*
information density and ratemeter statistics relationship, 702
lateral view positioning, liver-spleen, 720
thermic, thyroid, simultaneous with 144TcO4-, 411*
transmission, aid to cisternography, 870*
transmission-emission, 141Am, 144I-MAA, lungs, 861*
transverse section, orthogonal tangent correction, 447*
unidirectional, 571, 702

Selenium
normal metabolism, MIRD pamphlet 9

Selenium-75
"Ga, 141In, simultaneous measurement in tumors, in mice, 624
marker for thyroid orientation, 865*
multiple gamma figures of merit, 419*
-NA-selenate-S colloid, pancreas imaging, subtraction technique, 469*
nuclear parameters, MIRD pamphlet 9
-RBC, handling by abnormal spleen, in rats, 420*

Selenium-75, selenomethionine
biological distribution, MIRD pamphlet 9
carotid body tumor, 640
distribution compared to 144F-5- and 6-fluorotryptophan, in animals, 713
effect of diet Ca on uptake, in rats, 85
liver focal defect characterization, 440*
pancreas imaging, 51
pancreas imaging, subtraction technique, 469*
purity, MIRD pamphlet 9
radiation dose to humans, MIRD pamphlet 9
uptake by hepatoma, 565
uptake in post-surgery pancreatic bed, 765
uses for diagnosis, MIRD pamphlet 9

Sensitivity
multiple gamma figures of merit, 419*
plane, focused collimator, energy dependence, 19

Sodium
content, biological samples, neutron activation analysis, 293
total-body, neutron activation analysis, 487

Sodium-24
total-body Na, neutron activation analysis, 487

Spinal cord
144Tc-HSA angiography, 567

Spleen
abscess diagnosis, 144Tc-S colloid, 331
absorbed dose calculations, 856
accessory, rupture, 333
capacity test, 430*
14Cr-RBC, rate of loss, 686
displacement, gastric dilatation, 223
functional asplenia and persistent neutrophilic leukocytosis, 224
infarction, 144Tc-S colloid scan, 563
141I-rose bengal-HSA microspheres, preparation, distribution, in dogs, 470*
-liver imaging, 144Tc-S colloid, in trauma, 438*
-liver scan in Hodgkin's disease, 453*
-liver scan, lateral views, 720
portal circulation evaluation, 689
Se- and 144Fe-RBC handling, in rats, 420*

972
sequestration, comparison of \(^{99m}\text{Tc}-\text{RBC}\) from four preparation procedures, 809

size change in response to epinephrine, 211, 951

\(^{99m}\text{Tc}-\text{S colloid uptake during immunization, in animals, 435}\*

lungs, ventilation, bronchial obstruction, 561
lungs, ventilation, camera-computer system, 933
lungs, ventilation, in heart disease, 470*
lungs, ventilation, multiple views, 871*
lungs, ventilation, perfusion, in cystic fibrosis, 473*
lungs, ventilation, perfusion, in infants, 873*
lungs, ventilation, perfusion, pediatrics, 419*
lungs, ventilation, perfusion, **Tc-labeled pollen grains**
inhaled and ingestion, 478*
MTF of three camera collimators, 481*
myocardial blood flow, multichannel magnifying collimator, 414*
regional cerebral blood flow, computer-camera system, 916
washout, kidney transplant evaluation, 793

X-ray
radiation damage to chromosomes, in rats, 479*
**Se, MIRD pamphlet 9**

Ytterbium-169
-chelate, cisternography, relative radiation dose, 468*
-DTPA, cisternography, 73
-DTPA, CSF clearance in meningitis, in dogs, 942
-DTPA, kinetics in brain sarcoma and kidney, in mice, 205
-DTPA, kinetics in cisternography, 442*
-EDTA, kidney transplant, serial imaging, 793

Zinc-65
blood levels during immuniation, in animals, 435*

Zirconium-95
content, **Mo-**Tc generator eluate, 570
NOTICE TO ALL SUBSCRIBERS OF
THE JOURNAL OF NUCLEAR MEDICINE

The JOURNAL OF NUCLEAR MEDICINE is proud to have maintained the same subscription rate since January 1969. However, because of the steadily increasing size of the JOURNAL over the past four years and the associated increase in manufacturing expense, the Board of Trustees of the Society of Nuclear Medicine has reluctantly decided it must increase the subscription rate starting January 1, 1973. The new subscription rate will be:

- U.S. rate: $40.00
- Canada, South America, Mexico: $42.00
- Elsewhere (includes airmail postage): $45.00
- Student: $20.00
- Single issue rate: $4.00
- June issue rate: $7.00

All subscriptions must be entered on a calendar-year basis.

WORLD FEDERATION OF NUCLEAR MEDICINE AND BIOLOGY

First World Congress of Nuclear Medicine and Biology
September 30—October 5, 1974  Tokyo and Kyoto, Japan

The First World Congress of Nuclear Medicine and Biology will be held in Tokyo and Kyoto, Japan, from September 30 to October 5, 1974, under the auspices of the World Federation of Nuclear Medicine and Biology (WFNMB).

The Congress is the first international event to be organized following the official foundation of WFNMB in Mexico on October 26, 1970. This meeting represents one of the most authoritative scientific projects ever planned in the field of nuclear medicine based on the Foundation Charter of 1970, and similar meetings are to be held every four years.

The Organizing Committee for the Congress is now making extensive preparations and has selected a meeting date that will not conflict with other international congresses in related fields scheduled for that time of year. Since a large number of participants from all over the world are expected, the Organizing Committee would appreciate information from every country on the number of persons who might attend.

A second progress report on the meeting will be mailed out soon. If you have any questions concerning the congress, please contact:

Hideo Ueda, M.D., President
First World Congress
of Nuclear Medicine and Biology
c/o Japanese Society of Nuclear Medicine
The Second Department of Medicine
Faculty of Medicine, University of Tokyo
7-3-1, Hongo, Bunkyo-ku, Tokyo 113, Japan
