

# JNM

Official Publication of  
The Society of  
Nuclear Medicine

**THE JOURNAL OF NUCLEAR MEDICINE** (ISSN 0161-5505) is published monthly by The Society of Nuclear Medicine, Inc., 136 Madison Avenue, New York, NY 10016-6760. Second Class Postage paid at New York, NY and additional mailing offices. *Postmaster*, send address changes to *The Journal of Nuclear Medicine*, 136 Madison Avenue, New York, NY 10016-6760.

**EDITORIAL COMMUNICATIONS** should be sent to the Editor: H. William Strauss, MD, The Journal of Nuclear Medicine, Room 5406 MGH-East, Bldg. 149, 13th St., Charlestown, MA 02129 (617) 726-5786. *Books and monographs* covering the use of nuclear medicine and its allied disciplines will be reviewed as space is available. *Send review copies to the Editor.*

**BUSINESS COMMUNICATIONS** concerning advertising, subscriptions, change of address, and permission requests should be sent to the publisher, The Society of Nuclear Medicine, 136 Madison Avenue, New York, NY 10016-6760 (212)889-0717. Advertisements are subject to editorial approval and are restricted to products or services pertinent to nuclear medicine. Advertising rates are available from the publisher. Closing date is the first of the month preceding the date of issue.

**SUBSCRIPTION RATES** for 1991 calendar year are \$120 within the United States; \$130 for Canada and Pan American countries; \$160 elsewhere. Student subscriptions are \$70 (with proof of student status). Single copies \$10.00; foreign \$11.00; convention issue (May) \$12.00; foreign \$13.00. Make checks payable, in U.S. dollars drawn on U.S. banks, to The Society of Nuclear Medicine. Notify the Society of change of address and telephone number at least 30 days before date of issue by sending both the old and new addresses.

### Play It Again, Sam

From the movie, "Casablanca."

The repeat performance and the sequel are both time tested concepts. They offer an already eager audience the opportunity to experience the same warm and fuzzy feelings once again. They are, however, different in critical ways. The repeat performance is just that: to the last detail the words, music, and action are the same. The audience knows what to expect, and can sing along because they have memorized the lyrics. Sequels, however, are supposed to extend the familiar, adding to what is known. To be successful they must deliver on that promise.

Scientific articles have much in common with sequels—and nothing with the repeat performance. As investigators concentrate their work in a particular area, they are likely to publish on the same subject. Each new report, however, must deliver on the promise of new observations, extending the frontier in the author's area of expertise. In fact, each report should be new from head to toe: new experiments, new observations, new results and, to set the work apart from that which preceded it, new words.

Unfortunately some authors prefer to emulate the repeat performance in their work. Once they have an article published, they assume it is acceptable to incorporate the same structure, even the same words, into succeeding manuscripts. After all, they rationalize, their research is a natural outgrowth of prior work, why not the descriptions? Here, however, science and entertainment part company. Using someone else's words is plagiarism, while less offensive, is also among the proscribed precepts of our profession. Aside from being unethical, re-using your previously used words can have a dulling effect on readers who, sensing they have read the work sometime before (*deja vu*), will skip on to the next article before coming to any of the 'new' observations.

Cost is another difference between repeat performance and sequels. Sequels cost more. To completely rewrite abstracts, introductory passages and elements of the discussion sections requires a serious effort on the part of the author. But new work deserves new words. Readers recognize the effort and appreciate the fresh look that comes from rethinking and restating concepts.

The hallmark of the authors of great literature is their choice of words and the uniqueness of each contribution. Why should we tolerate anything less in science?
