

## Erratum

Due to a production error, the bottom panels in Figures 1 and 2 in "Reversible Cerebral Perfusion Abnormalities Associated with Cyclosporine Therapy in Orthotopic Liver Transplantation" by Lorberboym et al. (March 1996, pages 467–469) were transposed. The corrected images are printed below.

**FIGURE 1.** (A) Noncontrast CT shows symmetrical low density in the white matter of the parieto-occipital regions bilaterally. (B) Representative transaxial slices from the initial <sup>99m</sup>Tc-HMPAO SPECT performed 4 days later show moderately and symmetrically reduced perfusion to both parieto-occipital lobes.

**FIGURE 2.** (A) Noncontrast CT performed 2 wk later reveals only minimal resolution of white matter abnormality in parieto-occipital area. (B) Representative transaxial slices from the follow-up <sup>99m</sup>Tc-HMPAO study show almost complete resolution of the previous abnormalities with only mildly reduced perfusion in the left occipital lobe.
