

This sponge revolutionized thyroid testing!

By eliminating the disadvantages of earlier methods, the Triosorb Sponge has achieved a real breakthrough in thyroid testing. It is an in vitro test unmatched in accuracy, speed and convenience.

Accuracy: Because factors such as red blood cells and exogenous iodine have been eliminated from consideration in the Triosorb Test, it is unmatched in accuracy.

Speed: With only 3 washes and no need for double pipettings, shakers, or incubators, the Triosorb Test can be more rapidly performed than any other T-3 test.

Convenience: Triosorb is in a disposable kit ready for immediate use at room temperature, making it the simplest and most convenient thyroid function test to perform.

McAdams* reported that "The resin sponge (Triosorb) technique is superior to the erythrocyte method for performing the I^{131} T3 test in terms of simplicity, convenience and elimination of errors characteristic of the erythrocyte procedure."

Triosorb is available to all doctors, hospitals and clinical laboratories – AEC licensing is not required. Because Triosorb will enable far more screenings to be performed, this procedure may soon become as standard as today's blood counts and urinalyses.

*McAdams, G. B. and Reinfrank, R. F., Journal of Nuclear Medicine, 5:112, Feb., 1964. 411270

TRIOSORB®
T-3 DIAGNOSTIC KIT

The Volk Radiochemical Company has been producing radiopharmaceuticals and radiochemicals for human and research use for the past ten years. This is our only business. Continued technological improvements and innovations have been constant goals as exemplified by our pioneering production of Iodine-125 as a useful medical isotope and our introduction of the "Silver Saddle" which removes free iodide from iodinated organic compounds such as Hippuran.

Twenty separate individual isotopic dose products are available in standard and special potencies.

CONVENIENT—to the world's busiest airport (Chicago's O'Hare) insures delivery tomorrow via Air Express to any one of 21,000 U. S. cities.

NUCLEAR INSTRUMENTS FOR CLINICAL RESEARCH AND DIAGNOSIS: COMPLETE, CURRENT, CREATIVE

Since 1946, Nuclear-Chicago Corporation has designed and produced versatile, automatic instruments and systems for clinical research and diagnosis.

The instrument or system that bears the Nuclear-Chicago name often provides the stimulus for the increasing use of radioisotopes in clinical medicine. Here are but a few examples. There are more—instruments and systems of proven merit and constantly enlarging application.

Pho/Dot™ Isotope Scanner—the

most advanced scanner available. Automatic controls take the guesswork out of scanning. Separate photo- and dot-recording systems produce a superb display of the location and concentration of isotope-labelled compounds within the human body.

Pho/Gamma™ Scintillation Camera—faster, more efficient than the most advanced photomechanical scanner. Because of its speed and sensitivity, it can (1) produce complete pictures of radioisotope distribution in organs or body areas at speeds up to ten times faster than photomechanical scanners and (2) produce rapid-sequence, stop-motion pictures of dynamic processes such as the flow of isotopes into and out of an organ.

In-Vivo Counting—with Thyrad™ and Renaltron™ Systems for evaluating thyroid uptake and kidney function. Both use highly efficient

Nal(Tl) crystal detectors plus the latest solid-state electronics for reliable, long-term performance.

In-Vitro Counting—with the largest selection of manual and automatic gamma systems. Advanced electronics, sensitive Nal(Tl) crystal well-type detectors ensure a high order of reliability.

Clinical Accessories—include a variety of mobile detector stands and instrument racks. Also available are specialized detectors for surgical applications and a selection of scintillation detectors, collimators, and lead shielding.

For further details, consult your Nuclear-Chicago sales engineer.

**WITH THE MODEL 146 GENERAL PURPOSE SCALER
YOU CAN COUNT ON A SURE THING!**

The model 146 General Purpose Scaler meets the needs of a broad range of counting applications—whether geiger, scintillation, or proportional. This instrument features one microsecond resolving time, count capacity to 9,999,999, and provisions for preset count and preset time. With the two input modes (voltage mode: 1 millivolt sensitivity; current mode: no preamp required) and the 6KV high voltage power supply, a wide variety of counting gases such as helium isobutane, argon methane, and methane can be used. The transistorized model 146 has plug-in card circuitry for reliability and ease of maintenance.

Service available through all Baird-Atomic sales offices, in the U.S. and abroad. Write to the Baird-Atomic Instrument Division for our detailed technical data sheet AT 146 or for a demonstration by a field engineer.

Scientists: Investigate challenging opportunities with Baird-Atomic. An Equal Opportunity Employer.

when investing in a scintillation scanner

what should you
look for?

among other things . . .

dependable local service

No matter how good your scanner may be, it's no good to you at all if it's out of commission. Your busy schedule simply can't tolerate the disruptions growing out of equipment "downtime".

Across the United States, there are over 400 Picker-employed servicemen working out of 112 Service Centers and backed up by over 40 service specialists. This service force is substantially larger than that of all other nuclear instrument manufacturers *put together*.

 **MEDOTOPES[®]**
SQUIBB RADIOPHARMACEUTICALS

Medotopes reflect the latest developments in nuclear medicine. All provide the utmost in safety and convenience. All have unique packaging safeguards so that direct contact is never required. Exclusive lead shield enclosures are fitted with bottle caps that unscrew automatically. Saf-Tag[®] vials and bottles are carefully encased and double protected by transparent, shatterproof plastic coatings, and shipping cartons have convenient "pull-tab" openers. And, each preparation is custom-handled, each delivery custom-routed by Squibb Traffic Service. Access to three major airports expedites shipment.

Squibb Radiopharmaceuticals are available to the AEC-licensed physician. For full information, write to Professional Service Dept., Squibb, 745 Fifth Avenue, New York 22, N. Y.

watchdog: *Tracerlab Twin-film badge service*

plus many other nuclear services . . .
scores of reliable radioactive sources

Here's the perfected film badge service—the unique Twin-film badge from Tracerlab. For complete laboratory peace of mind, for full detection of beta, gamma, neutron, x-ray and mixed radiation—the Twin-film badge assures health-guarding dosimetry. And computers speed results to you!

Tracerlab provides a wide range of health physics services: bioassay • environmental analysis • fission and corrosion products analysis • activation analysis • neutron absorption measurement • radioisotope applications.

Radioactive sources? Tracerlab provides the safest, most reliable sources in the field. Stock or custom-made. For further information on a full range of sources and services for the nuclear field, contact Tracerlab.

universal II scintiscanner

Shown with 3" Detector and Photoscanner

Scans in ANY PLANE
with
Patient in Any Position

Model ST-300, 3 inch Scintimeter, complete with lead shielding and four focusing collimators, provides minimum background count and maximum resolution.

Variable Scan Speed and Adjustable Spacing

The only scanner that accepts both 2 and 3 inch detectors for scanning in any plane, Curtis Nuclear's Model SN-250 Scintiscanner is designed to scan the brain, heart, liver, kidneys and other vital organs with no discomfort to the patient. A one operator instrument, its modular construction permits its use with a wide selection of detectors, collimators, and counting and recording instruments. Features includes "joy stick" positioning, no large "over-the-patient" structure, illuminated outline of scan area, and universal head assembly that allows a multitude of tests in addition to scanning.

When connected with the dual, transistorized Photoscanner, Model PS 123T, the scanner provides a choice of either continuous film exposure (rate) or periodic exposure (integral).

Write for complete information and specifications to . . .

"first in scanning"

THE ORIGINAL REED-CURTIS

1948 East 46th Street, Los Angeles, California 90058

NUC-D-4-243

FIRST CHOICE

ONE OUT OF TWO. Proof of the accepted superiority of Nuclear-Chicago's Pho/Dot isotope scanner for clinical use—every second scanner sold today is a Pho/Dot.

TWO FOR THE SHOW. Pho/Dot's dual display of the location and concentration of isotope-labelled compounds within organs and areas of the body. On X-ray film by a photorecording system. On paper by a dot-recording system.

SECOND TO NONE. Human-engineered to eliminate operator error. Advanced design with a multitude of electromechanical improvements.

ONE, TWO, THREE WAYS. To make sure you know about Pho/Dot: see your Nuclear-Chicago sales engineer, ask your colleagues, or write us.
