

SNMMI 2014 Annual Meeting

Top research from around the world and the latest advances in technology were brought together for the 2014 SNMMI Annual Meeting in St. Louis, MO, June 7–11. The meeting welcomed more than 5,700 physicians, technologists, physicists, scientists, and exhibitors for the latest news and in-depth reviews of molecular imaging technologies, clinical applications, and translational and advanced research topics.

This year's meeting offered more than 100 scientific sessions, almost 750 oral presentations, and more than 1,155 posters. Educational courses covered topics including dose optimization, multimodality imaging, targeted radioisotope therapies, imaging in infection and inflammation, and the status of DOTA agents. In the exhibit hall, more than 150 companies showcased the latest in nuclear medicine and molecular imaging technology.

One highlight of the meeting was the SNMMI plenary session on Sunday, June 8, where lymphoma survivor, award-winning author, and NBC news correspondent Jonathan Alter presented the Henry N. Wagner, Jr. Lecture on "The Future of Patient-Centered Medicine."

Plenary and other sessions at the meeting featured the presentation of numerous awards and honors. Many of those recognized will be profiled in Newsline over the coming months. In this issue, the Aebersold and de Hevesy awardees are profiled.

Also at the meeting, SNMMI held its fourth annual Patient Program, at which more than 100 patients and caregivers attended sessions on advances in nuclear medicine and molecular imaging. Topics featured included colorectal cancer, prostate cancer, thyroid cancer, and neuroendocrine tumors.

The 2015 SNMMI Annual Meeting will be held in Baltimore, MD, June 6–10.
