# RADIOLOGICAL SAFETY TRAINING:

## A necessity for the safe and effective use of radiation and radioactive materials

by R. J. Augustine, Ph.D.  
Technical Director  
APPLIED HEALTH PHYSICS, INC.

Adequate training in radiological safety is a vital necessity for the safe and effective use of radiation and radioactive materials, and is a requirement for licensing by many regulatory agencies. Applied Health Physics, Inc., as part of its complete program of professional radiological safety and radiation application services, offers custom training in radiological safety.

Training programs are tailored to the actual or anticipated use of radiation, and also to the education and experience of the students. Courses are offered at all levels of sophistication — from orientation programs for administrative personnel to detailed, comprehensive, technical courses for those responsible for radiological safety.

Training may be provided on site at the user's facility, or at our training

facility near Pittsburgh. From one to several hundred students may be enrolled. Courses are taught by professional health physicists with many years of experience in radiological safety education.

Examples of custom tailored training include courses in the radiological safety aspects of the following areas:

- Medical Radiography and X-ray
- Medical Uses of Radium
- Medical Uses of Radioisotopes

If you use or anticipate using radiation or radioactive materials, please write or call me and I will be happy to discuss in detail our radiological safety training program and our radiation application services. For more information on AHP's complete range of services, write for Bulletin M-2, or phone.

P. O. Box 197 • Bethel Park, Pa. 15102 • Phone: 412-563-2242

**About Applied Health Physics:** A professional organization founded and staffed by certified health physicists. It pioneered in offering all radiation safety services and products from one professional source. In addition to training, these services include Radiological Safety Audits; Licensing and Regulation Aid; Repair; Calibration, and Leasing of Radiation Instruments; Leak Testing of Sealed Sources; and a wide range of professionally evaluated Radiation Safety Products.
