By eliminating the disadvantages of earlier methods, the Triosorb Sponge has achieved a real breakthrough in thyroid testing. **It is an in vitro test unmatched in accuracy, speed and convenience.**

**Accuracy:** Because factors such as red blood cells and exogenous iodine have been eliminated from consideration in the Triosorb Test, it is unmatched in accuracy.

**Speed:** With only 3 washes and no need for double pipetting, shakers, or incubators, the Triosorb Test can be
revolutionized thyroid testing!

more rapidly performed than any other T-3 test.

Convenience: Triosorb is in a disposable kit ready for immediate use at room temperature, making it the simplest and most convenient thyroid function test to perform.

McAdams reported that "The resin sponge (Triosorb) technique is superior to the erythrocyte method for performing the T3 test in terms of simplicity, convenience and elimination of errors characteristic of the erythrocyte procedure."

Triosorb is available to all doctors, hospitals and clinical laboratories—AEC licensing is not required. Because Triosorb will enable far more screenings to be performed, this procedure may soon become as standard as today's blood counts and urinalyses.

New! Sterile TechneKow-CS Generator

INJECTABLE SODIUM PERTECHNETATE $^{99mTc}$ from your own COMPACT PRODUCTION FACILITIES

Now daily production of $^{99mTc}$ pertechnetate solution is practical even for low volume users. Nuclear Consultant sealed, sterile TechneKow-CS generator is a closed system developed from experience with thousands of $^{99mTc}$ generators. The new TechneKow-CS generator features an eluate reservoir to eliminate loss of liquid within the ion exchange column. New TCS Positive Action Milking System assures withdrawal of complete solution, and graded shielding provides adequate personnel protection. Ask your local area laboratory or your Nuclear/Mallinckrodt sales representative for full information, and for your copy of the new booklet: Rectilinear Scanners in Clinical Medicine.

Only Nuclear Consultants can offer:
- Proof of knowledge gained by shipping more $^{99mTc}$ generators than all other producers put together.
- "Instant Technetium" in sterile, ready to inject form, from nearby local area laboratories.
- Either sterile or non-sealed TechneKow generators.
- Licensing assistance from our exclusive staff of medical physics consultants — let us help you.

MEETS USAEC
$^{99mTc}$ LICENSING REQUIREMENTS

Sealed sterile system — semi-automatic milker kit for aseptic withdrawal of sterile sodium pertechnetate $^{99mTc}$.
$^{99mTc}$ contamination negligible (less than 1 $\mu$C per mc of $^{99mTc}$), confirmed with exclusive Nuclear Consultants Molytech Calibrator.
Aluminum contamination negligible, less than 0.5 mg per 10 mc $^{99mTc}$.
No radioactive contamination from other isotopes.
Complete assay procedure — simple determination.
Maximum personnel protection — Heavy lead shielding eliminates radiation hazard.
a new name in nuclear medicine
Early in 1965, Neisler Laboratories, Inc., an 80-year-old ethical pharmaceutical company, was purchased by Union Carbide Corporation, long recognized as one of this country's leaders in industrial nuclear research. As a result of this action, many of the radioisotopes produced by Union Carbide's nuclear reactor at Tuxedo, New York, will soon become available for use in nuclear medicine. Pharmaceutical processing will be carried out adjacent to the reactor where the radioisotopes are created, and the useful products will be distributed by Neisler, a company whose personnel are completely oriented to serving the needs of the medical profession.

directly from our nuclear reactor to your radioisotope laboratory

Neisler Laboratories now offers the first of its line of nuclear reactor products for medicine — the NEIMOTEC T. M. (99Mo/99mTc) Generator — for the convenient production of short-lived technetium-99m, one of the most useful radioisotopes available for clinical investigation. Write for details.

NEISLER LABORATORIES, INC.
Subsidiary of Union Carbide Corp.
P.O. Box 433, Tuxedo, New York 10987
First let us admit that the dynamic clinical techniques which use radioisotopes for studying various bodily functions are more complicated than well counting or even scanning procedures. Undeniable.

But these methods are valuable, providing either confirmatory clinical data or, in some instances, information which just cannot be obtained by any other means. Long-established applications of these techniques include, for example, renal function studies, cardiac output determinations and hepatic function assessment. Or perhaps the newer techniques such as cerebral blood flow or pulmonary function would be of interest.

Whatever your interest, we can minimize the technical difficulties of getting into this field.

Our offer: to work with you in any and every way to make your entry into this area as painless as possible. Specifically, we would be happy to talk with you about these methods, to provide the necessary information on existing procedures, to help you plan your radio-tracer studies, to assist in interpreting results, and to aid in the training of your staff in all phases of radioisotope dynamic function methodology. Or, to work with you in any other way that you may wish. With no obligation.

Then it will come as no surprise that we can also help you select the equipment that makes sense for your needs. And to begin with, this can be a relatively simple outfit; your first commitment can be limited to the basic equipment since refinements can be added easily as needed. You should also know that our line of instruments for dynamic function work of every kind is unmatched in diversity or quality.

So, an invitation: call your Picker Nuclear representative, or drop us a line. Start a dialogue.

Picker Nuclear: 1275 Mamaroneck Avenue, White Plains, New York 10605
The demonstrable advantages of a dual 5-inch crystal scanner should be investigated by all those with a high clinical load who desire high resolution, rapid scans of both large and small organs or of the whole body.

The two scanning heads, exactly opposite each other, have separate, and complete electronics and print-out so that the data collected by each crystal may be used separately, in coincidence, or additively.

Mechanical and electronic specifications are the same as for our other large-crystal radioisotope scanners Models 54F and 54H: Scanning speeds continuously variable to 200 inches per minute (500 cm/min.); adequate shielding even for high energy gamma emitters (up to 3 inches lead and 1 inch steel); high resolution crystals (9 per cent or better); accurate, reproducible scanning speeds and line spacing; no scalloping at any speeds; low background crystals (2 inch thick pure NaI light pipe); Gamma-graphic (patent pending) or slit mask photoscans; unequivocal one year warranty anywhere in USA or Canada.

This unparalleled radioisotope scanner is priced at $28,750 with delivery in 90 days guaranteed.
A Valuable Addition To Your Professional Library

Journal of Nuclear Medicine

AN IMPORTANT NEW JOURNAL

featuring

Original articles in clinical medicine, basic and clinical medical research, physics and chemistry dealing with the use of isotopes in humans, and articles on related subjects. The latter includes dosimetry, instrumentation, protection, techniques, biologic effects contributing to the use or effects of isotopes in clinical medicine or the clinical effects of ionizing radiation.

Publications in the AEC Monograph Series on Radiation Biology and Industrial Hygiene

**Beryllium:**
ITS INDUSTRIAL HYGIENE ASPECTS
edited by H. E. Stokinger
U. S. Public Health Service, Cincinnati

Gives a detailed account of how beryllium and its compounds may be handled safely and of what engineering controls are needed in each operation or circumstance. Procedures are recommended and presented in detail, and appropriate analytic methods are critically selected and commented upon. This is done for specimens of both atmospheric and biologic origin.

June 1966, 394 pp., $11.60

**Pulmonary Deposition and Retention of Inhaled Aerosols**
by T. F. Hatch and P. Gross
1964, 192 pp., $5.95

**ADVANCE ANNOUNCEMENT . . .**

**Thorium:**
Its Industrial Hygiene Aspects
by R. E. Albert
December 1966 in preparation
About 225 pp., $7.00

The above books have been prepared under the direction of the American Industrial Hygiene Association for the Division of Technical Information, United States Atomic Energy Commission

**Tissue Grafting and Radiation**
by H. S. Micklem and John F. Loutit
Medical Research Council, Radiobiological Research Unit, Harwell, Berkshire

April 1966, 228 pp., $7.00

**Radiation, Radioactivity, and Insects**
by R. D. O'Brien and L. S. Wolfe
1964, 211 pp., clothbound $5.95

**Radiation, Isotopes, and Bone**
by F. C. McLean and A. M. Budy
1964, 216 pp., clothbound $5.95

**Radiation and Immune Mechanisms**
by W. H. Taliaferro, L. G. Taliaferro, and B. N. Jaroslaw
1964, 152 pp., clothbound $5.95

**Light:** Physical and Biological Action
H. H. Seliger and W. D. McElroy
1965, 417 pp., $12.00

**Mammalian Radiation Lethality:** A Disturbance in Cellular Kinetics
by V. P. Bond, T. M. Flieder, and J. O. Archambeau
1965, 340 pp., $9.50

**Ionizing Radiation:**
Neural Function and Behavior
by D. J. Kimeldorf and E. L. Hunt
1965, 331 pp., $10.00

The above books have been prepared under the direction of the American Institute of Biological Sciences for the Division of Technical Information, United States Atomic Energy Commission
Stercow
Shielded Milking System

a new design

The Stercow together with the Shielded Stercow Milking System offers a unique possibility to minimize radiation exposure to maintain sterility to save laboratory time.

DRN 4332 Technetium (Tc99m) Stercow

FIRST
WITH THE PUREST
Hg 197

*NEW CHLORMERODRIN Hg 197 FROM NCC CONTAINS LESS THAN 0.1% Hg 203...even a full week after shipment. No other source provides this quality. And NCC supplies it to you at no additional cost.

Uniform Specific Activity
This excellent brain scanning agent is shipped with the same Hg 197 specific activity every day. Specific activity adjusted to 400 μc/mg on the calibration date and freedom from Hg 203 eliminate all concern about diuretic effects.

Controlled Decay Program
Hg 197 decays in your patient, not on your shelf. Ask for full details about NCC's controlled decay program.

Demonstrated Leadership from the Specialist
When you specify NCC, you receive the quality product you want, delivered when you want it. To be sure you're using the finest Hg 197 available, order now.

ATLANTA  CHICAGO  CLEVELAND  HOUSTON  LOS ANGELES
MIAMI  NEW YORK  SAN FRANCISCO  WASHINGTON, D.C.
There's no clinical advantage to a $3^{1/4}'' \times 4^{1/4}''$ photo of radioisotope distribution.

Unless you like speed, sensitivity, and statistical accuracy.

That's why the Pho/Gamma® Scintillation Camera is making all rectilinear scanners obsolete (even our own).

Consult your Nuclear-Chicago sales engineer or write to us for information about the impact Pho/Gamma can have on your work.
