

SUPPLEMENTAL FIGURE 1. (A) Representative radiochromatograms of monkey blood samples at 1, 4, and 20 min following drug administration. Intact R - ^{11}C verapamil was detected at approximately 2.4 min. The major metabolite was observed in the polar fraction at approximately 0.5 min. (B) TLC autoradiograms of monkey blood extracts 1 min (lane 2), 4 min (lane 3), 10 min (lane 4), 20 min (lane 5), 30 min (lane 6), 45 min (lane 7), and 60 min (lane 8) following administration of ^{11}C oseltamivir. Lane 1 represents pure ^{11}C oseltamivir as an authentic standard.
