Supplemental Appendix

Article Selection Process

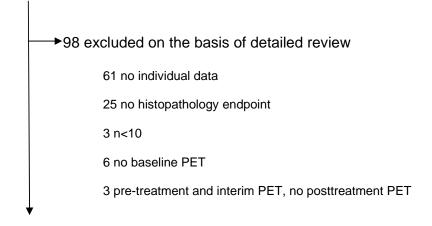

Our literature search using PUBMED (MEDLINE included) and EMBASE (after exclusion of duplicates) identified 917 and 832 potentially relevant articles, respectively (**Supplemental Figure 1**). By scanning the titles and abstract we excluded 808 studies for the PUBMED search and 824 studies for the EMBASE studies. We then retrieved and reviewed 117 full reports for inclusion and excluded 95 studies: 61 studies did not provide (absolute) individual data, 25 studies did not use pathology of a surgical specimen as an endpoint, in 3 studies the amount of patients was less than 10, in 6 studies no pre-treatment PET scan was performed, and in 3 studies a pre-treatment and an interim PET scan were performed, but no posttreatment PET scan. Manual cross referencing (original studies and reviews) did not reveal additional studies.

Supplemental Figure 1

1749 eligible studies (PUBMED n=917 and EMBASE n=832)

117 eligible studies (PUBMED n=109 and EMBASE n=8)

19 studies included in meta-analysis
