28	2.8	1.9	1.8	96.3 (94.3)

The % radiochemical purity of Re-188-P2045 and the % of contaminants in each dose are shown. Thin layer and high-pressure liquid chromatographic analysis of Re-188 The RCP was determined by integrating the HPLC chromatogram peaks. The results of HPLC analysis are shown parenthetically. The components of the Re-188 preparations for each dosing day determined by ITLC are shown in each column. The % radiochemical purity of Re-188-P2045 was determined by ITLC and also by HPLC shown in parenthesis. Images of the chromatograms were converted into 8-bit TIFF format with retention of pixel sizing information and count calibration factors (counts/pixel/second); allowing chromatogram peak quantitation
