

SUPPLEMENTAL FIGURE 1. MR images of a FOLFOX treated tumor reflect variability of ADC. Transverse slices of a tumor at different time points of FOLFOX therapy are depicted here. The upper panel shows T2 weighted images, which were used for the definition of ROIs. ADC maps in the lower panel reveal a variable and heterogeneous distribution of water diffusion and show a trend for reduced ADC_{mean} . Scale bar = 2 mm.

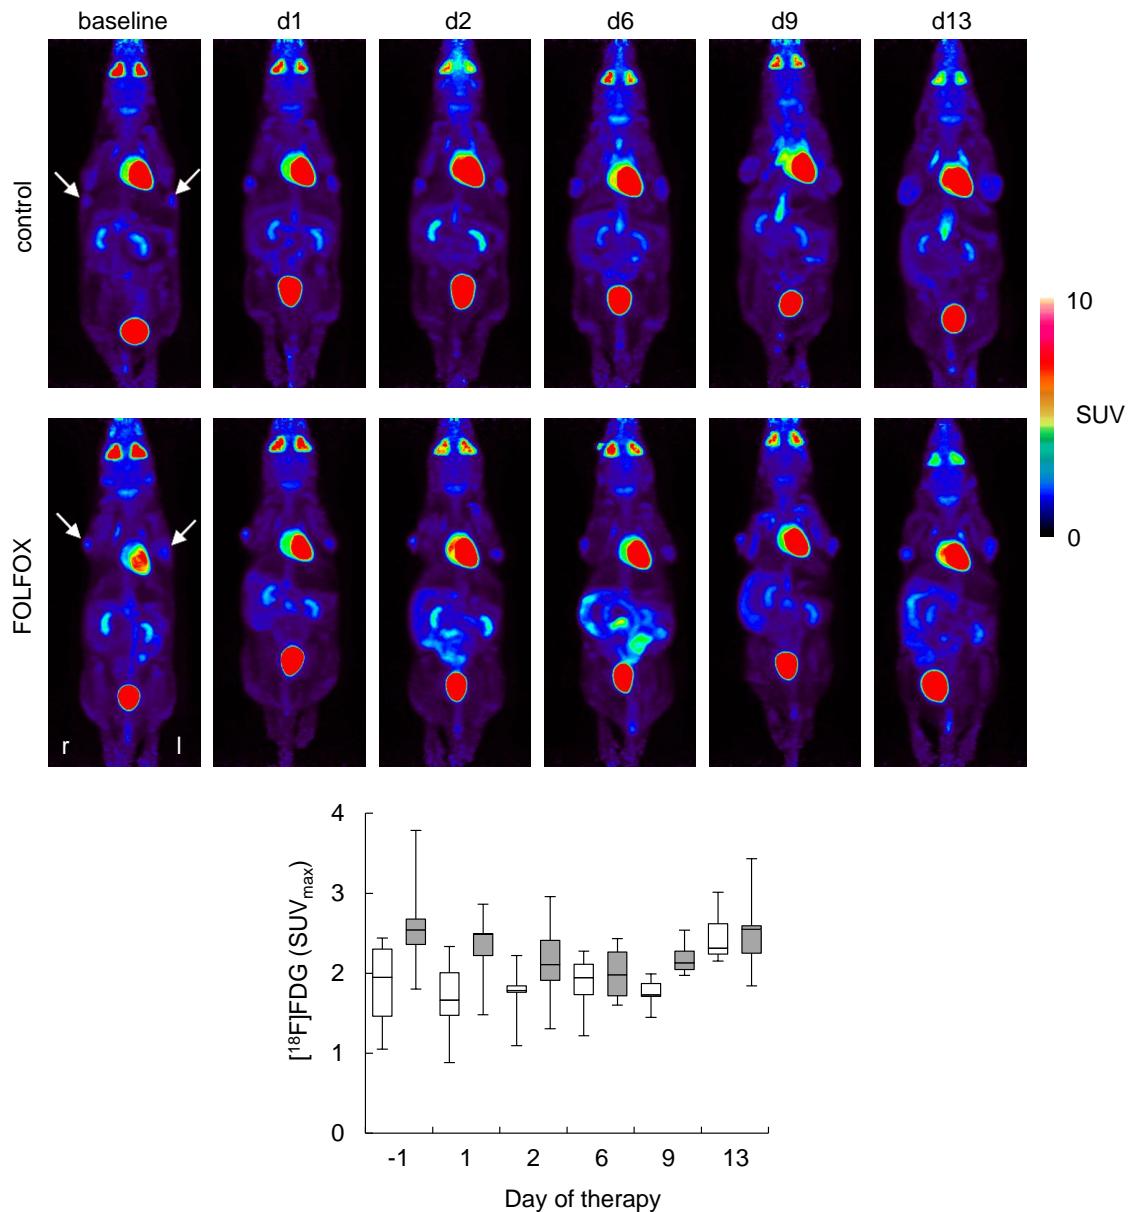

SUPPLEMENTAL FIGURE 2. Western blots of Colo205 xenografts revealed upregulation of different proteins involved in thymidine metabolism after FOLFOX therapy. However, non-parametric testing of such low sample sizes does not allow detection of statistically significant differences relative to controls

on the respective gel. Expression levels are expressed relative to actin loading control. White: control, grey: FOLFOX, striped: 5-FU.

SUPPLEMENTAL FIGURE 3. (A) The percent necrotic area, determined on H&E sections, was highly variable but not significantly altered upon FOLFOX or 5-FU therapy. (B) Cellular density, determined from Ki67 immunohistochemistry, which can also be interpreted as an indicator of cell death, was not altered in a biologically relevant manner. White: control, grey: FOLFOX, striped: 5-FU; **: $P < 0.01$ relative to control.

SUPPLEMENTAL FIGURE 4. Uptake of $[^{18}\text{F}]FDG$ was not affected by FOLFOX therapy in Colo205 xenografts. Tumors are indicated by white arrows in the maximum-intensity-projections of representative mice. White: control, grey: FOLFOX.

Supplemental Table S2 – S12 show means \pm standard deviation of results presented in this manuscript. Numbers of samples are presented in brackets, if not indicated otherwise.

SUPPLEMENTAL TABLE 1. Experimental schedule.

tumor	readout	therapy	# of mice and time points
Colo205	[¹⁸ F]FLT, ADC	control	4M repetitively (bl [‡] , d1, d2, d6, d9 [§] , d13 ^{†,})
		FOLFOX	4M repetitively (bl [‡] , d1, d2, d6, d9 [§] , d13 ^{†,})
		5-FU	2M d1*
	[¹⁸ F]FDG	control	3M repetitively (bl, d1, d2, d6, d9, d13*)
		FOLFOX	3M repetitively (bl, d1, d2, d6, d9, d13*)
	ex vivo analyses*	control	2M d9, 2M d13
		FOLFOX	4M d1, 4M d2, 2M d6, 2M d9, 2M d13
		5-FU	2M d1
	HCT116	control	3M bl and d1
		FOLFOX	3M bl and d1

*: Mice used for ex vivo analyses: tumors were cut in three pieces and subjected to histology, western blot and thymidine analysis. Plasma thymidine was also analyzed.

†: 2M were subjected to ex vivo analyses after completion of the imaging schedule.

‡: due to problems in tracer synthesis, only 2M obtained a baseline PET scan

§: 2M only for FLT

||: 2M only for MRI

bl: baseline; M: mice (with two tumors each)
